

TRUSTVERIFY BY PROPLOX

Instant Trust.

AI-Powered Property Verification

Replacing weeks of manual legal verification with minutes of AI-driven document intelligence

National Level Presentation | Team Proplox

THE PROBLEM

Buying property in India still means weeks of uncertainty

Every property transaction in India depends on verifying a stack of legal documents — sale deeds, RTC/Pahani records, mutation extracts, encumbrance certificates, khata certificates, and tax receipts. Today, this process is almost entirely manual.

High Cost

- A single manual legal verification costs Rs. 15,000 - Rs. 20,000 on average
- Costs multiply across lawyers, notaries, and registrar visits

Slow Turnaround

- Manual cross-checking across documents takes 1 to 3 weeks
- Delays loan sanctioning, registration, and deal closure

Fragmented Process

- Buyers, builders, banks, and lawyers all work in silos
- No single source of truth for a transaction's status

Risk of Fraud

- Ownership disputes, forged documents, and title fraud go undetected
- Manual review is prone to human oversight

OUR SOLUTION

Proplox: an AI verification engine for property transactions

Proplox uses an AI-powered document intelligence model to read, cross-verify, and flag risks across an entire property document set — in minutes instead of weeks. What used to require multiple experts working over days now happens through a single upload.

What makes Proplox different

- Upload every property document together — sale deed, RTC, mutation, encumbrance certificate, khata, tax receipts — in one step
- The AI model reads and cross-references every document against every other document automatically
- Any mismatch, missing document, or legal risk is instantly flagged with a severity level and explanation
- A professional, legally-formatted verification report is generated automatically — ready to share with a bank, lawyer, or buyer
- OTP-based secure login protects every user's account and document access

From upload to verified report — five steps

1 Register & Verify User signs up and logs in through secure OTP-based mobile verification.	2 Bulk Document Upload All property documents are uploaded together in a single step — no back-and-forth.
3 AI Cross-Verification The AI model reads every document and cross-checks ownership, extent, encumbrances, and legal history.	4 Risk Flagging Any mismatch or legal gap is flagged instantly, with severity and a recommended action.
5 Verified Report A professional legal-style verification report is generated and ready to download or share.	

WHO BENEFITS

Built for everyone in the property transaction chain

Individual Buyers

- Verify a property before paying a rupee towards it
- Get a clear, professional report at a fraction of legal-verification cost
- Avoid disputes and fraud with AI-flagged risks

Builders & Developers

- Manage every project, unit, and buyer from one dashboard
- Onboard buyers and track document, verification, loan & registration status per unit
- Reduce time spent chasing documents manually

Banks & NBFCs

- Faster, AI-assisted due diligence for loan sanctioning
- Standardised, consistent risk scoring across every application
- Reduced turnaround time from application to disbursal

Lawyers & Legal Teams

- AI does the first-pass document reading and flagging
- Lawyers focus only on the flagged, high-risk cases
- Significant reduction in manual review hours

THE IMPACT

Same verification. A fraction of the cost and time.

Traditional Manual Verification	Proplox AI Verification
Rs. 15,000 - Rs. 20,000 per property	A fraction of the traditional cost
1 – 3 weeks turnaround	Minutes to a few hours turnaround
Manual, inconsistent risk assessment	Consistent AI-driven risk flagging every time
Documents reviewed one at a time	All documents cross-verified together, instantly

A simple, secure platform under the hood

Application

- A clean, easy-to-use app experience for buyers, builders, banks, and lawyers
- Works across web and mobile

Backend & Data

- A secure backend manages all documents, users, and transaction records
- All property, document, and user data is stored in a structured, secure database

AI Verification Engine

- An AI/LLM-based model reads and cross-verifies uploaded property documents
- Trained to recognise legal document structures, ownership chains, and common risk patterns

Security

- OTP-based mobile verification protects every login
- Role-based access ensures buyers, builders, and banks only see what's relevant to them

OUR VISION

Making property transactions instantly trustworthy

Proplox aims to become India's trusted property-transaction operating system — where every buyer, builder, bank, and lawyer works off the same verified, AI-checked source of truth. What takes weeks and thousands of rupees today should take minutes and a fraction of the cost tomorrow.

"You sell. Proplox handles the verification."

Thank you.
